Selenium WebDriver		BDD
Java		Page Object Model
OOP		

ABOUT THIS PROFILE

Enthusiastic Software Engineer with practical experience in automation for Verification & Validation (V&V) using Selenium and Java. Proficient in creating scalable automated testing frameworks that enhance product quality and reliability. Skilled at optimizing workflows, minimizing manual intervention, and improving efficiency through automation solutions. Dedicated to continuous improvement and delivering robust, high-performing systems.

WORK EXPERIENCE

Software Engineer | Financial Services | 2025 – current

Practo Website Test Suite

BDD · Cucumber · Decision-making · Java

Designed and implemented an automated testing framework for Practo's Medicine and Appointment modules using BDD approach. Automated end-to-end scenarios including product search, cart operations, checkout flow, and appointment booking for both logged-in and guest users.

Key Highlights:

- Developed reusable Page Object Model and step definitions to improve maintainability.
- Integrated Extent Reports for detailed execution logs and screenshots.
- Automated 6 major scenarios covering 69 steps, reducing manual testing effort significantly.
- Handled dynamic elements and synchronization issues using advanced Selenium techniques.
- Logged and analyzed failures (e.g., NoSuchElementException) to enhance defect tracking ,UI stability and functionality.
